Akanksha Chaudhary

Product Designer | UI/UX Designer | Web3 Builder

akankshachaudhary567@gmail.com | GitHub | X | Saviours | AI Prep

Profile

Product designer and Web3 builder interested in making complex technology intuitive, trustworthy, and usable. I work across UI/UX, product flows, visual systems, and interactive prototypes, with experience exploring AI-powered products, Ethereum, DeFi, and onchain reputation. My focus is on turning early-stage ideas into clear product experiences and working closely with builders to bring them to life.

Education

University of Delhi
Bachelor of Science (B.Sc.)

Experience

Freelance Product Designer & UI/UX Designer 2021 – Present
Independent

- Design product interfaces, user journeys, and visual systems for early-stage products across Web3, AI, education, and developer tools.
- Translate product ideas into structured user flows, interface concepts, responsive layouts, and interactive experiences with a focus on clarity and usability.
- Collaborate with builders and stakeholders to refine product direction, communicate complex functionality visually, and maintain consistency across screens and components.

Freelance Teacher & Curriculum Creator 2021 – Present
Independent

- Create structured learning materials and educational experiences that make complex concepts easier to understand through clear explanations and practical examples.

Community Manager
Web3 & Technology Communities

- Supported Web3 communities through product communication, user engagement, feedback collection, and community-facing content.
- Developed a practical understanding of user needs, product adoption, and the role of clear communication in building trust around emerging technology.

Selected Projects

Saviours — Security Memory for AI Agents | *ETHOnline 2026*

- Contributed to the product experience of a security memory layer that helps AI agents reuse onchain threat intelligence instead of repeatedly investigating known risks.
- Designed around an investigation-to-verdict workflow, making evidence, threat status, and reusable security information understandable through the interface.
- Explored how ENS-based records, agent integrations, and a reusable memory layer can make security decisions easier to inspect and consume across applications.
- *Technologies:* Ethereum, ENS, The Graph, AI agents, Next.js, TypeScript.

AI Prep — AI-Powered Preparation Platform | *Product Design / UI/UX*

- Designed the product UI for an AI-powered preparation experience, with an emphasis on making research, study planning, practice, and interview preparation feel like one coherent workflow.
- Focused on information hierarchy, navigation, actionable progress views, and reducing cognitive load across a feature-rich learning interface.
- Worked on presenting AI-assisted workflows in a way that feels structured and approachable rather than like a generic chatbot.

ThemeVault — Theme Marketplace & UI Playground | *GitHub*

- Designed and built an interactive theme playground for discovering, previewing, customizing, and exporting UI themes.
- Developed a token-based design system covering color, typography, spacing, radius, and shadows to support consistent, real-time interface customization.
- *Technologies:* Next.js, React, TypeScript, Tailwind CSS, Zustand, Radix UI, MongoDB.

InView LMS — Learning Management Platform | *Product / UI/UX*

- Designed learning flows and interface concepts focused on clear information architecture, structured content, and an intuitive learning experience.

Web3 & Builder Experience

- **AI + Web3:** Interested in agent security, verifiable identity, onchain reputation, and safer autonomous transactions.
- **Ethereum Ecosystem:** Product design exploration across ENS, DeFi, wallet-connected experiences, and blockchain-based reputation.
- **Product Mindset:** Comfortable moving from an early idea to user flows, interface design, prototypes, and collaboration with developers.

Skills

- **Product Design:** UI/UX, User Flows, Information Architecture, Interaction Design, Prototyping, Design Systems, Responsive Design
- **Visual Design:** Visual Hierarchy, Typography, Branding, Graphic Design, Digital Art, Creative Direction
- **Web3:** Ethereum, ENS, DeFi Concepts, Wallet Experiences, Onchain Reputation, Blockchain UX
- **Development:** Figma, Next.js, React, TypeScript, Tailwind CSS, Git, GitHub, Vercel
- **AI Product Design:** AI-Assisted Workflows, Conversational Interfaces, Information Presentation
- **Community:** Community Management, User Feedback, Developer Communities, Curriculum Design
